SUMMARY

Security engineer with 11+ years securing large-scale multi-cloud and Kubernetes environments. Hands-on expertise in runtime telemetry, vulnerability management, distributed security agents, and cloud infrastructure hardening. Experienced in building automated detection pipelines, policy-as-code, and AI-driven enrichment workflows to improve signal fidelity, reduce noise, and accelerate incident response.

EXPERIENCE

DevSecOps Engineer III — Box

Jan 2024 – Present

- Secure AWS, GCP, and Azure workloads with automated security agent deployment pipelines.
- Operate runtime security sensors and telemetry across Kubernetes and Linux fleets.
- Drive vulnerability management workflows and remediation automation across cloud platforms.
- Introduce AI/RAG-based enrichment to improve detection quality and triage speed.

Product Security Engineer — Snowflake

Oct 2021 – Dec 2023

- Maintained distributed security agents across multi-cloud and Kubernetes environments.
- Automated evidence collection for host and container events to accelerate investigations.
- Implemented policy-as-code guardrails and cloud-security automation.

AWS Cyber Security Analyst — Monese

Jan 2020 – Aug 2021

- Built serverless automated cloud misconfiguration detection and response pipelines.
- Designed scalable SIEM architecture with Terraform and cloud-data lake backend.
- Developed detections across CloudTrail, DB, VPC, and application telemetry sources.

Senior Security Analyst — Oracle Cloud

Dec 2018 – Jan 2020

- Engineered and deployed security detections across global regions.
- Automated rollout of detection logic and alerting pipelines.
- Performed threat hunts and Linux telemetry tuning for observability.

Senior Security & Cloud Engineer — Goodera

Mar 2017 – Dec 2018

- Built a complete cloud security program as sole security owner.

- Implemented SIEM automation, server hardening, and CIS benchmarks.

Software Development Engineer in Test II — Freecharge **Mar 2016 - Mar 2017**

- Delivered web UI and API automation using Java + Selenium; strengthened test coverage for core payment flows.
- Performed performance and security testing for high-traffic web services; supported PCI readiness.
- Introduced automation practices that reduced manual regression effort and sped up releases.

QA Engineer — Chainalytics **Feb 2014 - Mar 2016**

- Built automated test suites (Java + Selenium) for logistics web applications.
- Conducted API performance testing with JMeter; identified bottlenecks and improved SLAs.
- Executed functional testing across complex business workflows to ensure release quality.

SKILLS

- Cloud: AWS, GCP, Azure, Oracle
- Kubernetes & Linux security
- Runtime defense, Infra hardening, eBPF-based telemetry, SIEM & telemetry pipelines
- Vulnerability management & Posture automation
- AI-powered enrichment & RAG for detection engineering
- Python, Bash, Terraform

EDUCATION & CERTIFICATIONS

PG Diploma

IT Infra & Security, CDAC Bengaluru (2013-2014)

B.Tech

Electronics & Telecommunication, NIT Raipur (2008-2012)

ISO 27001 Lead Implementer
